UPDATE RELEASE NOTES

18.2

ebay Enhancements

Solera | HOLLANDER INTERNATIONAL

18.2 Contents

eBay Enhancements

1. eBay Compatibility tick box

2. Ability to add in additional eBay listing tags

18.2 Build Release Notes

With 18.2 we have improved the process of getting your parts up to eBay faster.

1. eBay Compatibility now ticked as default

To improve the time it takes to upload parts to eBay and get the eBay listing setup. We have updated the Motor Vehicle Record (MVR) to reccognise that when the K-Type field is populated (as shown below)

Then all parts from this vehicle when being listed on eBay by Pinnacle will automatically have the default compatibility selected, as shown below.
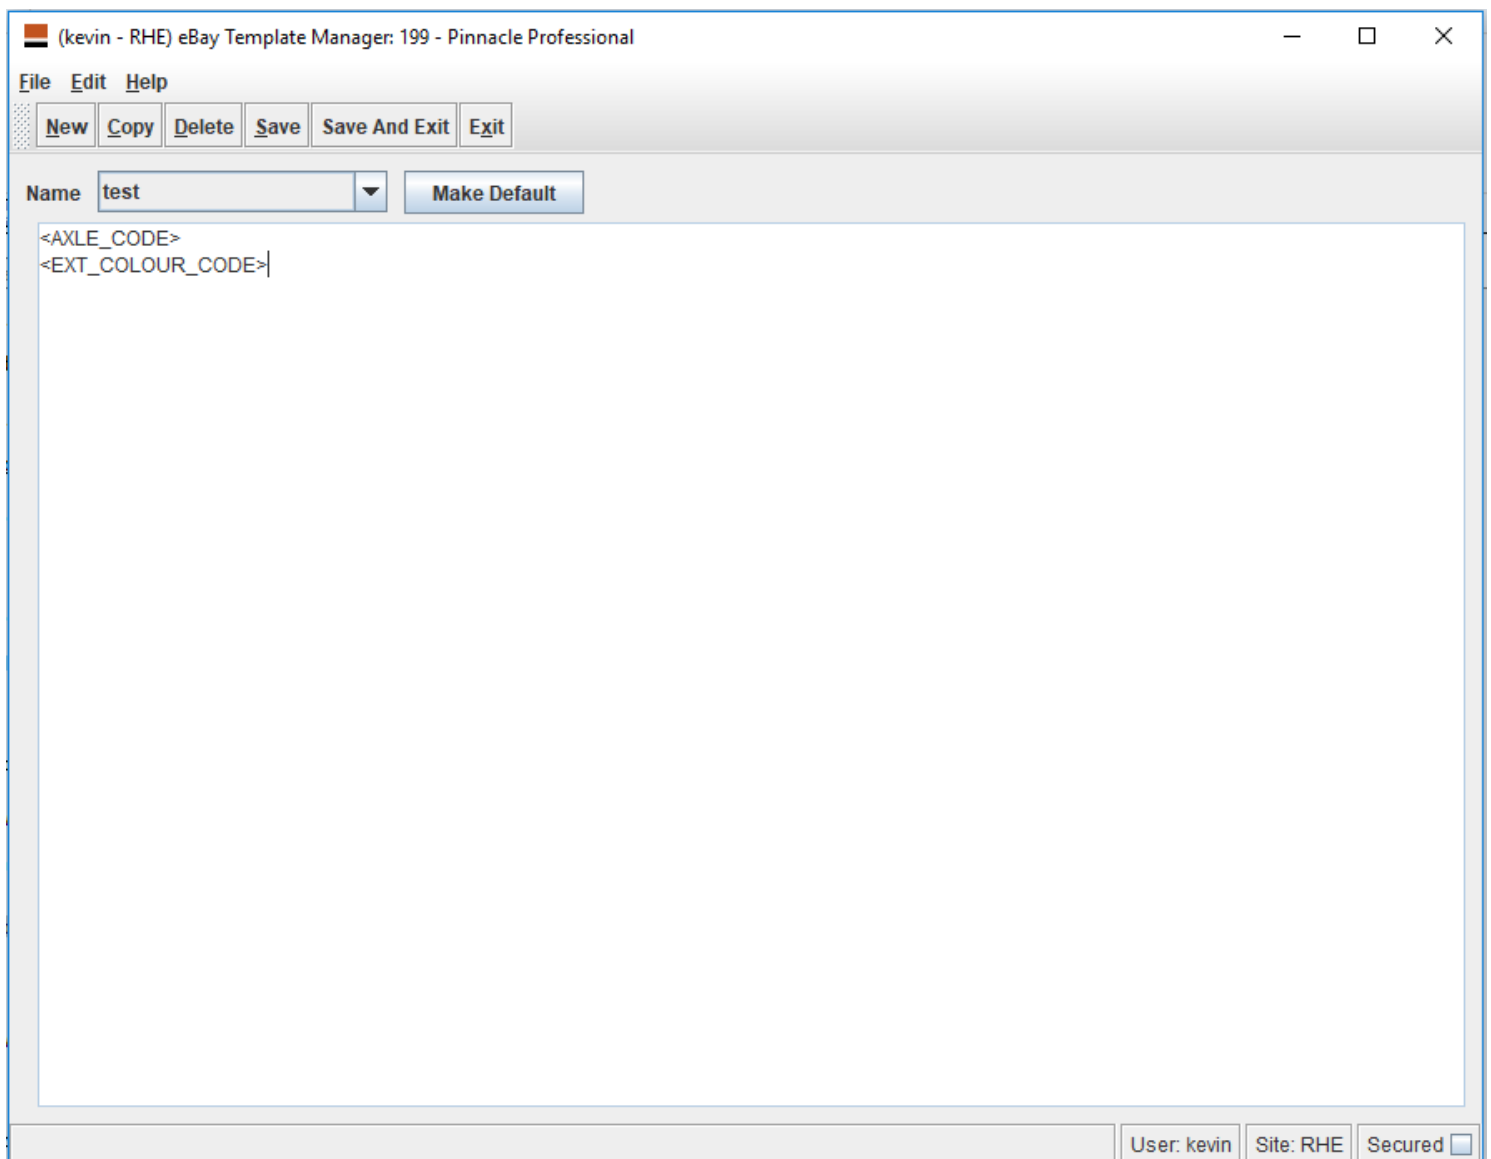

2. Add Additional eBay listing tags

As part of our development of the eBay Template Manager. There has been additions to the eBay listing Tags which can be used to pass information over to the eBay description

The New Tags which have been added are:

<EXT_COL_CODE> – This tag puts the colour of the vehicle in to the eBay Description

<AXLE_CODE>

This will allow you provide more relevant information to potential customers when selling your parts on eBay.
